Sect. 4. On Definitions.

urn:nbn:de:gbv:45:1-697

not used in the Greek with so great latitude as the other, although they are relative terms.

The modes or species of motion he makes to be fix, to wit, generation, corruption, increase, decrease, alteration, and change of place.

The modes or species of having are eight. 1. Having a quality or habit, as having wisdom. 2. Having quantity or magnitude. 3. Having things adjacent, as having a fword. 4. Having things as parts, as having hands or feet. 5. Having in a part or on a part, as having a ring on one's finger. 6. Containing, as a cask is said to have wine. 7. Possessing, as having lands or houses. 8. Having a wife.

Another distinction of this kind is Aristotle's distinction of causes; of which he makes four kinds, efficient, material, formal,
and final. These distinctions may deserve a place in a dictionary
of the Greek language; but in English or Latin they adulterate
the language. Yet so fond were the schoolmen of distinctions of
this kind, that they added to Aristotle's enumeration, an impulsive cause, an exemplary cause, and I don't know how many more.
We seem to have adopted into English a final cause; but it is
merely a term of art, borrowed from the Peripatetic philosophy,
without necessity or use: for the English word end is as good as
sinal cause, though not so long nor so learned.

SECT. 4. On Definitions.

It remains that we make fome remarks on Ariftotle's definitions, which have exposed him to much censure and ridicule. Yet I think it must be allowed, that in things which need definition, and admit of it, his definitions are commonly judicious and accurate; and had he attempted to define such things only, his ene-Vol. II.

A a mies

mies had wanted great matter of triumph. I believe it may likewife be faid in his favour, that until Locke's effay was wrote, there was nothing of importance delivered by philosophers with regard to definition, beyond what Aristotle has faid upon that subject.

He confiders a definition as a speech declaring what a thing is. Every thing effential to the thing defined, and nothing more, must be contained in the definition. Now the effence of a thing confifts of these two parts: First, What is common to it with other things of the fame kind; and, fecondly, What distinguishes it from other things of the fame kind. The first is called the genus of the thing, the fecond its specific difference. The definition therefore confilts of these two parts. And for finding them, we must have recourse to the ten categories; in one or other of which every thing in nature is to be found. Each category is a genus, and is divided into fo many species, which are distinguished by their specific differences. Each of these species is again subdivided into fo many species, with regard to which it is a genus. This division and subdivision continues until we come to the lowest species, which can only be divided into individuals, distinguished from one another, not by any specific difference, but by accidental differences of time, place, and other circumstances.

The category itself being the highest genus, is in no respect a species, and the lowest species is in no respect a genus; but every intermediate order is a genus compared with those that are below it, and a species compared with those above it. To find the definition of any thing, therefore, you must take the genus which is immediately above its place in the category, and the specific difference, by which it is distinguished from other species of the same genus. These two make a perfect definition. This I take to be the substance of Aristotle's system; and probably the system of the Pythagorean school before Aristotle, concerning definition.

But weakness of human underlyand

But notwithstanding the specious appearance of this system, it has its defects. Not to repeat what was before faid, of the imperfection of the division of things into ten categories, the subdivifions of each category are no less imperfect. Aristotle has given fome fubdivisions of a few of them; and as far as he goes, his followers pretty unanimously take the fame road. But when they attempt to go farther, they take very different roads. It is evident, that if the feries of each category could be completed, and the division of things into categories could be made perfect, still the highest genus in each category could not be defined, because it is not a species; nor could individuals be defined, because they have no specific difference. There are also many species of things, whose specific difference cannot be expressed in language, even when it is evident to fense, or to the understanding. Thus, green, red, and blue, are very distinct species of colour; but who can express in words wherein green differs from red or blue?

Without borrowing light from the ancient fystem, we may perceive, that every definition must consist of words that need no definition; and that to define the common words of a language that have no ambiguity, is trisling, if it could be done; the only use of a definition being to give a clear and adequate conception of the

meaning of a word.

The logicians indeed distinguish between the definition of a word, and the definition of a thing; considering the former as the mean office of a lexicographer, but the last as the grand work of a philosopher. But what they have said about the definition of a thing, if it has a meaning, is beyond my comprehension. All the rules of definition agree to the definition of a word: and if they mean by the definition of a thing, the giving an adequate conception of the nature and essence of any thing that exists; this is impossible, and is the vain boast of men unconscious of the weakness of human understanding.

A a 2

The

The works of God are all imperfectly known by us. We fee their outfide, or perhaps we discover some of their qualities and relations, by observation and experiment, assisted by reasoning; but we can give no definition of the meanest of them which comprehends its real essence. It is justly observed by Locke, that nominal essences only, which are the creatures of our own minds, are perfectly comprehended by us, or can be properly defined; and even of these there are many too simple in their nature to admit of definition. When we cannot give precision to our notions by a definition, we must endeavour to do it by attentive resection upon them, by observing minutely their agreements and differences, and especially by a right understanding of the powers of our own minds by which such notions are formed.

The principles laid down by Locke with regard to definition, and with regard to the abuse of words, carry conviction along with them; and I take them to be one of the most important improvements made in logic fince the days of Aristotle; not so much because they enlarge our knowledge, as because they make us fensible of our ignorance, and shew that a great part of what speculative men have admired as prosound philosophy, is only a darkening of knowledge by words without understanding.

If Aristotle had understood those principles, many of his definitions, which furnish matter of triumph to his enemies, had never seen the light: let us impute them to the times rather than to the man. The sublime Plato, it is said, thought it necessary to have the definition of a man, and could find none better than Animal implume bipes; upon which Diogenes sent to his school a cock with his feathers plucked off, desiring to know whether it was a man or not.

SECT.

which are neither true nor take; foch as, a prayer, or with
