fig: 27.

sculis instar radicularum undique dependentibus, copiosissimis, ab aliis, quod sciam, nondum delineatis, ornata: ubi notanda

C C C C Tunicarum fœtus pellucidarum pars, a quibus vasculosa a me ex parte separata sive detraeta est, ut una cum fœtu in liquore suo ambiente conspicī possit: nam sciendum, maximam partem huius ovi humani tunica tali vasculosa, vasculis fluctuantibus, ut pietæ sunt, & dependentibus fuisse instructam.

D D Funiculus umbilicalis rudi modo adhuc apprens.

Fig. 27* **a a a a a** Ovulum a muliere per quatuor circiter, ut credit, hebdomades grida, magna uteri haemorrhagia & doloribus reiectum: quod fere pellucidum, multisque vasculis sive radiculis chorii, tanquam villis, in ambitu ornatum, in quo

b corpusculum appetet, embryonem adhuc informem repræsentans, quod quoque adhuc asservo.

Fig. 28. **a a a a a** Est pars ani & intestini recti aperta.

b b Inæquales eminentiae & rugæ in extima ora ani, ubi venæ lividæ tumentes in hoc cadavere apparebant.

c c c margo, qui a litt. **c c** ad litt. **a a** inferiores instar fimbriæ erat, ubi sphincter & intestinum rectum colore & consistentia, ut plerumque fieri solet, differebant.

d d d d Oscula minima quamplurima circa intestini recti finem, cum multis glandulis subrotundis, ut in hoc cadavere apparebant.

e e e e Oscula quædam maiora setam admittentia,
