An Inquiry Into The Nature and Causes Of The Wealth Of Nations

In Two Volumes

Smith, Adam

London, 1776

Chap. V. Of Bounties.

urn:nbn:de:gbv:45:1-1669

BOOK advantageous to the mother country, that they should be exempted from taxes which are paid by all the rest of their fellow subjects, will appear hereafter when I come to treat of colonies.

> DRAWBACKS however, it must always be understood, are useful only in those cases in which the goods for the exportation of which they are given, are really exported to fome foreign country; and not clandestinely reimported into our own. That some drawbacks, particularly those upon tobacco, have frequently been abused in this manner, and have given occasion to many frauds equally hurtful both to the revenue and to the fair trader, is well known.

CHAP. V.

Of Bounties.

OUNTIES upon exportation are, in Great Britain, frequently petitioned for, and fometimes granted to the produce of particular branches of domestick industry. By means of them our merchants and manufacturers, it is pretended, will be enabled to fell their goods as cheap or cheaper than their rivals in the foreign market. A greater quantity, it is faid, will thus be exported, and the balance of trade confequently turned more in favour of our own country. We cannot give our workmen a monopoly in the foreign, as we have done in the home market. We cannot force foreigners to buy their goods, as we have done our own countrymen. The next best expedient, it has been thought, therefore, is to pay them for buying. It is in this manner that the mercantile fystem proposes to enrich the whole country, and to put money into all our pockets by means of the balance of trade.

BOUNTIES.

Bounties, it is allowed, ought to be given to those branches of CHAP. trade only which cannot be carried on without them. But every branch of trade in which the merchant can fell his goods for a price which replaces to him, with the ordinary profits of flock, the whole capital employed in preparing and fending them to market, can be carried on without a bounty. Every fuch branch is evidently upon a level with all the other branches of trade which are carried on without bounties, and cannot therefore require one more than they. Those trades only require bounties in which the merchant is obliged to fell his goods for a price which does not replace to him his capital, together with the ordinary profit; or in which he is obliged to fell them for less than it really costs him to fend them to market. The bounty is given in order to make up this loss, and to encourage him to continue, or perhaps to begin, a trade of which the expence is supposed to be greater than the returns, of which every operation eats up a part of the capital employed in it, and which is of fuch a nature, that, if all other trades refembled it, there would foon be no capital left in the country.

THE trades, it is to be observed, which are carried on by means of bounties, are the only ones which can be carried on between two nations for any confiderable time together, in fuch a manner as that one of them shall always and regularly lose, or sell its goods for less than it really costs to fend them to market. But if the bounty did not repay to the merchant what he would otherwise lose upon the price of his goods, his own interest would soon oblige him to employ his stock in another way, or to find out a trade in which the price of the goods would replace to him, with the ordinary profit, the capital employed in fending them to market. The effect of bounties, like that of all the other expedients of the mercantile fystem, can only be to force the trade of a country into a N 2

channel

BOOK channel much less advantageous than that in which it would natuiv. rally run of its own accord.

> THE ingenious and well informed author of the tracts upon the corn trade has shown very clearly, that since the bounty upon the exportation of corn was first established, the price of the corn exported, valued moderately enough, has exceeded that of the corn imported, valued very high, by a much greater fum than the amount of the whole bounties which have been paid during that period. This, he imagines, upon the true principles of the mercantile fystem, is a clear proof that this forced corn trade is beneficial to the nation; the value of the exportation exceeding that of the importation by a much greater fum than the whole extraordinary expence which the publick has been at in order to get it exported. He does not confider that this extraordinary expence, or the bounty, is the smallest part of the expence which the exportation of corn really costs the society. The capital which the farmer employed in raifing it must likewise be taken into the account. Unless the price of the corn when fold in the foreign markets replaces, not only the bounty, but this capital, together with the ordinary profits of stock, the society is a loser by the difference, or the national stock is so much diminished. But the very reason for which it has been thought necessary to grant a bounty is the fupposed insufficiency of the price to do this.

THE average price of corn, it has been faid, has fallen confiderably fince the establishment of the bounty. That the average price of corn began to fall somewhat towards the end of the last century, and has continued to do so during the course of the fixty-four first years of the present, I have already endeavoured to show. But this event, supposing it to be as real as I believe it to be, must have happened in spite of the bounty, and cannot possibly have happened in consequence of it.

In years of plenty, it has already been observed, the bounty, by CHAP. occasioning an extraordinary exportation, necessarily keeps up the price of corn in the home market above what it would naturally fall to. To do fo was the avowed purpose of the institution. In years of scarcity, though the bounty is frequently suspended, yet the great exportation which it occasions in years of plenty, must frequently hinder more or less the plenty of one year from relieving the scarcity of another. Both in years of plenty, and in years of fcarcity, therefore, the bounty necessarily tends to raise the money price of corn fomewhat higher than it otherwise would be in the home market.

THAT, in the actual state of tillage, the bounty must necessarily have this tendency, will not, I apprehend, be disputed by any reafonable person. But it has been thought by many people, that by fecuring to the farmer a better price than he could otherwise expect in the actual state of tillage, it tends to encourage tillage; and that the confequent increase of corn may, in a long period of years, lower its price more than the bounty can raise it in the actual state which tillage may, at the end of that period, happen to be in.

I ANSWER, that this might be the case if the effect of the bounty was to raise the real price of corn, or to enable the farmer with an equal quantity of it to maintain a greater number of labourers in the fame manner, whether liberal, moderate, or fcanty, that other labourers are commonly maintained in his neighbourhood. But neither the bounty, it is evident, nor any other human institution, can have any fuch effect. It is not the real, but the nominal price of corn only, which can be at all affected by the bounty.

THE real effect of the bounty is not fo much to raise the real value of corn, as to degrade the real value of filver; or to make an equal quantity of it exchange for a finaller quantity, not only of corn,

BOOK IV.

corn, but of all other commodities: for the money price of corn regulates that of all other commodities.

IT regulates the money price of labour, which must always be such as to enable the labourer to purchase a quantity of corn sufficient to maintain him and his family either in the liberal, moderate, or scanty manner in which the advancing, stationary, or declining circumstances of the society oblige his employers to maintain him.

It regulates the money price of all the other parts of the rude produce of land, which, in every period of improvement, must bear a certain proportion to that of corn, though this proportion is different in different periods. It regulates, for example, the money price of grass and hay, of butcher's meat, of horses, and the maintenance of horses, of land carriage consequently, or of the greater part of the inland commerce of the country.

By regulating the money price of all the other parts of the rude produce of land, it regulates that of the materials of all manufactures. By regulating the money price of labour, it regulates that of manufacturing art and industry. And by regulating both, it regulates that of the compleat manufacture. The money price of labour, and of every thing that is the produce either of land or labour, must necessarily either rise or fall in proportion to the money price of corn.

Though in consequence of the bounty, therefore, the farmer should be enabled to sell his corn for four shillings the bushel instead of three and sixpence, and to pay his landlord a money rent proportionable to this rise in the money price of his produce; yet, if in consequence of this rise in the price of corn, four shillings will purchase no more goods of any other kind than three and sixpence

pence would have done before, neither the circumstances of the CHAP. farmer, nor those of the landlord, will be in the smallest degree mended by this change. The farmer will not be able to cultivate better: the landlord will not be able to live better. v. Addition.

THAT degradation in the value of filver which is the effect of the fertility of the mines, and which operates equally, or very near equally, through the greater part of the commercial world, is a matter of very little consequence to any particular country. The consequent rise of all money prices, though it does not make those who receive them really richer, does not make them really poorer. A fervice of plate becomes really cheaper, and every thing elfe remains precifely of the fame real value as before.

Bur that degradation in the value of filver which, being the effect either of the peculiar fituation, or of the political institutions of a particular country, takes place only in that country, is a matter of very great confequence, which, far from tending to make any body really richer, tends to make every body really poorer. The rife in the money price of all commodities, which is in this case peculiar to that country, tends to discourage more or less every fort of industry which is carried on within it, and to emable foreign nations, by furnishing almost all forts of goods for a fmaller quantity of filver than its own workmen can afford to do, to underfell them, not only in the foreign, but even in the home market.

IT is the peculiar fituation of Spain and Portugal, as proprietors of the mines, to be the diffributors of gold and filver to all the other countries of Europe. Those metals ought naturally, therefore, to be somewhat cheaper in Spain and Portugal than in any other part of Europe. The difference, however, should be no

BOOK more than the amount of the freight and infurance; and, on account of the great value and fmall bulk of those metals, their freight is no great matter, and their infurance is the same as that of any other goods of equal value. Spain and Portugal, therefore, could fuffer very little from their peculiar fituation, if they did not aggravate its disadvantages by their political institutions.

> SPAIN by taxing, and Portugal by prohibiting the exportation of gold and filver, load that exportation with the expence of fmuggling, and raife the value of those metals in other countries so much more above what it is in their own, by the whole amount of this expence. When you dam up a stream of water, as foon as the dam is full, as much water must run over the dam-head as if there was no dam at all. The prohibition of exportation cannot detain a greater quantity of gold and filver in Spain and Portugal than what they can afford to employ, than what the annual produce of their land and labour will allow them to employ, in coin, plate, gilding, and other ornaments of gold and filver. When they have got this quantity the dam is full, and the whole stream which flows in afterwards must run over. The annual exportation of gold and filver from Spain and Portugal accordingly is, by all accounts, notwithstanding these restraints, very near equal to the whole annual importation. As the water, however, must always be deeper behind the dam-head than before it, fo the quantity of gold and filver which these restraints detain in Spain and Portugal must, in proportion to the annual produce of their land and labour, be greater that what is to be found in other countries. The higher and ftronger the dam-head, the greater must be the difference in the depth of water behind and before it. The higher the tax, the higher the penalties with which the prohibition is guarded, the more vigilant and fevere the police which looks after the execution of the law, the greater must be the difference in the propor-

proportion of gold and filver to the annual produce of the land CHAP. and labour of Spain and Portugal, and to that of other countries. It is faid accordingly to be very confiderable, and that you frequently find there a profusion of plate in houses, where there is nothing elfe which would, in other countries, be thought fuitable or correspondent to this fort of magnificence. The cheapness of gold and filver, or, what is the fame thing, the dearness of all commodities, which is the necessary effect of this redundancy of the precious metals, discourages both the agriculture and manufactures of Spain and Portugal, and enables foreign nations to supply them with many forts of rude, and with almost all forts of manufactured produce, for a smaller quantity of gold and filver than what they themselves can either raise or make them for at home. The tax and prohibition operate in two different ways. They not only lower very much the value of the precious metals in Spain and Portugal, but by detaining there a certain quantity of those metals which would otherwise flow over other countries, they keep up their value in those other countries fomewhat above what it otherwife would be, and thereby give those countries a double advantage in their commerce with Spain and Portugal. Open the floodgates and there will prefently be less water above, and more below, the dam-head, and it will foon come to a level in both places. Remove the tax and the prohibition, and as the quantity of gold and filver will diminish considerably in Spain and Portugal, so it will increase fomewhat in other countries, and the value of those metals, their proportion to the annual produce of land and labour, will foon come to a level, or very near to a level, in all. The lofs which Spain and Portugal could fustain by this exportation of their gold and filver would be altogether nominal and imaginary. The nominal value of their goods, and of the annual produce of their land and labour would fall, and would be expressed or represented by a finaller quantity of filver than before; but their real value would VOL. II.

BOOK be the fame as before, and would be fufficient to maintain, command, and employ, the fame quantity of labour. As the nominal value of their goods would fall, the real value of what remained of their gold and filver would rife, and a fmaller quantity of those metals would answer all the same purposes of commerce and circulation which had employed a greater quantity before. The gold and filver which would go abroad would not go abroad for nothing, but would bring back an equal value of goods of some kind or another. Those goods too would not be all matters of mere luxury and expence, to be confumed by idle people who produce nothing in return for their confumption. As the real wealth and revenue of idle people would not be augmented by this extraordinary exportation of gold and filver, fo neither would their confumption be much augmented by it. Those goods would, probably, the greater part of them, and certainly fome part of them, confift in materials, tools, and provisions, for the employment and maintenance of industrious people, who would reproduce, with a profit, the full value of their confumption. A part of the dead stock of the fociety would thus be turned into active stock, and would put into motion a greater quantity of industry than had been employed before. The annual produce of their land and labour would immediately be augmented a little, and in a few years would, probably, be augmented a great deal; their industry being thus relieved from one of the most oppressive burdens which it at prefent labours under.

> THE bounty upon the exportation of corn necessarily operates exactly in the same way as this absurd policy of Spain and Portugal. Whatever be the actual state of tillage, it renders our corn fomewhat dearer in the home market than it otherwise would be in that state, and somewhat cheaper in the foreign; and as the average money price of corn regulates more or less that of

all other commodities, it lowers the value of filver confiderably in CHAP. the one, and tends to raise it a little in the other. It enables foreigners, the Dutch in particular, not only to eat our corn cheaper than they otherwife could do, but fometimes to eat it cheaper than even our own people can do upon the fame occafions; as we are affured by an excellent authority, that of Sir Mathew Decker. It hinders our own workmen from furnishing their goods for fo small a quantity of filver as they otherwise might do; and enables the Dutch to furnish their's for a smaller. It tends to render our manufactures somewhat dearer in every market, and their's fomewhat cheaper than they otherwife would be, and confequently to give their industry a double advantage over our own.

THE bounty, as it raises in the home market, not the real, but only the nominal price of our corn, as it augments, not the quantity of labour which a certain quantity of corn can maintain and employ, but only the quantity of filver which it will exchange for, it discourages our manufactures without rendering the smallest real fervice either to our farmers or country gentlemen. It puts, indeed, a little more money into the pockets of both, and it will perhaps be fomewhat difficult to perfuade the greater part of them that this is not rendering them a very real fervice. But if this money finks in its value, in the quantity of labour, provisions, and commodities of all different kinds which it is capable of purchasing, as much as it rises in its quantity, the service will be merely nominal and imaginary.

THERE is, perhaps, but one fet of men in the whole commonwealth to whom the bounty either was or could be really ferviceable. These were the corn merchants, the exporters and importers of corn. In years of plenty the bounty necessarily occasioned

BOOK occasioned a greater exportation than would otherwise have taken place; and by hindering the plenty of one year from relieving the fearcity of another, it occasioned in years of fearcity a greater importation than would otherwise have been necessary. It increased the business of the corn merchant in both, and in years of scarcity it not only enabled him to import a greater quantity, but to fell it for a better price, and confequently with a greater profit than he could otherwise have made, if the plenty of one year had not been more or less hindered from relieving the scarcity of another. It is in this fett of men, accordingly, that I have observed the greatest zeal for the continuance or renewal of the bounty.

> Our country gentlemen, when they imposed the high duties upon the importation of foreign corn, which in times of moderate plenty amount to a prohibition, and when they established the bounty, feem to have imitated the conduct of our manufacturers. By the one inftitution, they secured to themselves the monopoly of the home market, and by the other they endeavoured to prevent that market from ever being overstocked with their commodity. By both they endeavoured to raife its real value, in the fame manner as our manufacturers had, by the like institutions, raised the real value of many different forts of manufactured goods. They did not perhaps attend to the great and effential difference which nature has established between corn and almost every other fort of goods. When either by the monopoly of the home market, or by a bounty upon exportation, you enable our woollen or linenmanufacturers to fell their goods for fomewhat a better price than they otherwise could get for them, you raise, not only the nominal, but the real price of those goods. You render them equivalent to a greater quantity of labour and fubfiftence, you increase, not only the nominal, but the real profit, the real wealth and revenue

revenue of those manufacturers, and you enable them either to CHAP. live better themselves, or to employ a greater quantity of labour in those particular manufactures. You really encourage those manufactures, and direct towards them a greater quantity of the industry of the country, than what would probably go to them of its own accord. But when by the like institutions you raise the nominal or money price of corn, you do not raise its real value. You do not increase the real wealth, the real revenue either of our farmers or country gentlemen. You do not encourage the growth of corn, because you do not enable them to maintain and employ more labourers in raising it. The nature of things has stamped upon corn a real value which no human institution can alter. No bounty upon exportation, no monopoly of the home market can raise it. The freest competition cannot lower it. Through the world in general that value is equal to the quantity of labour which it can maintain, and in every particular place it is equal to the quantity of labour which it can maintain in the way, whether liberal, moderate, or fcanty, in which labour is commonly maintained in that place. Woollen or linen cloth are not the regulating commodities by which the real value of all other commodities must be finally measured and determined. Corn is. The real value of every other commodity is finally measured and determined by the proportion which its average money price bears to the average money price of corn. The real value of corn does not vary with those variations in its average money price, which fometimes occur from one century to another. It is the real value of filver which varies with them.

Bounties upon the exportation of any home-made commodity are liable, first, to that general objection which may be made to all the different expedients of the mercantile fystem; the objection of forcing some part of the industry of the country into a channel

lefa

v Addition.

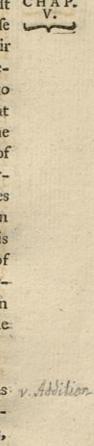

BOOK IV. less advantageous than that in which it would run of its own accord: and, fecondly, to the particular objection of forcing it, not only into a channel that is less advantageous, but into one that is actually disadvantageous; the trade which cannot be carried on but by means of a bounty being necessarily a losing trade. The bounty upon the exportation of corn is liable to this further objection, that it can in no respect promote the raising of that particular commodity of which it was meant to encourage the production. When our country gentlemen, therefore, demanded the eftablishment of the bounty, though they acted in imitation of our merchants and manufacturers, they did not act with that compleat comprehension of their own interest which commonly directs the conduct of those two other orders of people. They loaded the publick revenue with a very confiderable expence; but they did not in any respect increase the real value of their own commodity, and by lowering somewhat the real value of filver they discouraged in some degree the general industry of the country, and instead of advancing, retarded more or less the improvement of their own lands, which necessarily depends upon the general industry of the country.

To encourage the production of any commodity, a bounty upon production, one should imagine, would have a more direct operation than one upon exportation. It has, however, been more rarely granted. The prejudices established by the commercial system have taught us to believe that national wealth arises more immediately from exportation than from production. It has been more favoured accordingly, as the more immediate means of bringing money into the country. Bounties upon production, it has been said too, have been found by experience more liable to frauds than those upon exportation. How far this is true, I know not. That bounties upon exportation have been abused to many fraudulent

8

fraudulent purposes, is very well known. But it is not the interest CHAP. of merchants and manufacturers, the great inventors of all these expedients, that the home market should be overstocked with their goods, an event which a bounty upon production might fometimes occasion. A bounty upon exportation, by enabling them to fend abroad the furplus part, and to keep up the price of what remains in the home market, effectually prevents this. Of all the expedients of the mercantile fystem, accordingly, it is the one of which they are the fondest. I have known the different undertakers of some particular works agree privately among themselves to give a bounty out of their own pockets upon the exportation of a certain proportion of the goods which they dealt in. This expedient succeeded so well that it more than doubled the price of their goods in the home market, notwithstanding a very considerable increase in the produce. The operation of the bounty upon corn must have been wonderfully different, if it has lowered the money price of that commodity.

Something like a bounty upon production, however, has y Addition. been granted upon fome particular occasions. The encouragements given to the white-herring and whale-fisheries may, perhaps, be confidered as somewhat of this nature. They tend directly to render the goods cheaper in the home market than they otherwife would be in the actual state of production. In other respects their effects are the same as those of bounties upon exportation. By means of them a part of the capital of the country is employed in bringing goods to market, of which the price does not repay the cost, together with the ordinary profits of stock. But though the bounties to those fisheries do not contribute to the opulence of the nation, they may perhaps be defended as conducing to its defence, by augmenting the number of its failors and shipping. This may frequently be done by means of such ionsons boundless. Or encouraging canada bounties,

BOOK bounties, at a much finaller expence than by keeping up a great standing navy, if I may use such an expression, in time of peace, in the fame manner as a franding army.

> Some other bounties may be vindicated perhaps upon the fame principle. It is of importance that the kingdom should depend as little as possible upon its neighbours for the manufactures necessary for its defence; and if these cannot otherwise be maintained at home, it is reasonable that all other branches of industry should be taxed in order to support them. The bounties upon the importation of naval stores from America, upon British made fail-cloth, and upon British made gunpowder, may perhaps all three be vindicated upon this principle. The first is a bounty upon the production of America, for the use of Great Britain. The two others are bounties upon exportation.

> WHAT is called a bounty is fometimes no more than a drawback, and confequently is not liable to the fame objections as what is properly a bounty. The bounty, for example, upon refined fugar exported may be confidered as a drawback of the duties upon the brown and muscovado sugars, from which it is made. The bounty upon wrought filk exported, a drawback of the duties upon raw and thrown filk imported. The bounty upon gunpowder exported, a drawback of the duties upon brimstone and faltpetre imported. In the language of the customs those allowances only are called drawbacks, which are given upon goods exported in the same form in which they are imported. When that form has been altered by manufacture of any kind, they are called bounties.

> PREMIUMS given by the publick to artifts and manufacturers who excell in their particular occupations, are not liable to the same objections as bounties. By encouraging extraordinary dexterity

terity and ingenuity, they serve to keep up the emulation of the CHAP. workmen actually employed in those respective occupations, and are not confiderable enough to turn towards any one of them a greater share of the capital of the country than what would go to it of its own accord. Their tendency is not to overturn the natural balance of employments, but to render the work which is done in each as perfect and compleat as possible. The expence of premiums, befides, is very trifling; that of bounties very great. The bounty upon corn alone has fometimes cost the publick in one year, more than three hundred thousand pounds.

Bounties are fometimes called premiums, as drawbacks are fometimes called bounties. But we must in all cases attend to the nature of the thing, without paying any regard to the word.

I CANNOT conclude this chapter concerning bounties, without observing that the praises which have been bestowed upon the law which establishes the bounty upon the exportation of corn, and upon that fystem of regulations which is connected with it, are altogether unmerited. A particular examination of the nature of the corn trade, and of the principal British laws which relate to it, will fufficiently demonstrate the truth of this affertion. The great importance of this subject must justify the length of the digression.

THE trade of the corn merchant is composed of four different branches, which, though they may fometimes be all carried on by the same person, are in their own nature four separate and distinct trades. These are, first, the trade of the inland dealer; secondly, that of the merchant importer for home confumption; thirdly, that of the merchant exporter of home produce for foreign confumption; and, fourthly, that of the merchant carrier, or of the importer of corn in order to export it again.

VOL. II. I. THE

BOOK IV.

I. THE interest of the inland dealer, and that of the great body of the people, how opposite soever they may at first fight appear, are, even in years of the greatest scarcity, exactly the same. It is his interest to raise the price of his corn as high as the real scarcity of the season requires, and it can never be his interest to raise it higher. By raifing the price he discourages the consumption, and puts every body more or less, but particularly the inferior ranks of people, upon thrift and good management. If, by raifing it too high, he discourages the confumption so much that the supply of the feafon is likely to go beyond the confumption of the feafon, and to last for some time after the next crop begins to come in, he runs the hazard, not only of losing a considerable part of his corn by natural causes, but of being obliged to sell what remains of it for much less than what he might have had for it feveral months before. If by not raifing the price high enough he discourages the confumption fo little, that the supply of the season is likely to fall fhort of the confumption of the feafon, he not only loses a part of the profit which he might otherwise have made, but he exposes the people to fuffer before the end of the feafon, instead of the hardfhips of a dearth, the dreadful horrors of a famine. It is the interest of the people that their daily, weekly, and monthly confumption, should be proportioned as exactly as possible to the fupply of the feafon. The interest of the inland corn dealer is the fame. By fupplying them, as nearly as he can judge, in this proportion, he is likely to fell all his corn for the highest price, and with the greatest profit; and his knowledge of the state of the crop, and of his daily, weekly, and monthly fales, enable him to judge, with more or less accuracy, how far they really are supplied in this manner. Without intending the interest of the people, he is necessarily led, by a regard to his own interest, to treat them, even in years of scarcity, pretty much in the same manner as the prudent master of a vessel is sometimes obliged to treat his crew. When he

he foresees that provisions are likely to run short, he puts them CHAP. upon fhort allowance. Though from excess of caution he should fometimes do this without any real necessity, yet all the inconveniencies which his crew can thereby fuffer are inconfiderable in comparison of the danger, misery, and ruin, to which they might sometimes be exposed by a less provident conduct. Though from excess of avarice, in the same manner, the inland corn merchant should sometimes raise the price of his corn somewhat higher than the scarcity of the season requires, yet all the inconveniencies which the people can fuffer from this conduct, which effectually fecures them from a famine in the end of the feafon, are inconfiderable in comparison of what they might have been exposed to by a more liberal way of dealing in the beginning of it. The corn merchant himself is likely to suffer the most by this excess of avarice; not only from the indignation which it generally excites against him, but, though he should escape the effects of this indignation, from the quantity of corn which it necessarily leaves upon his hands in

the end of the feafon, and which, if the next feafon happens to prove favourable, he must always sell for a much lower price than

WERE it possible, indeed, for one great company of merchants to possess themselves of the whole crop of an extensive country, it might, perhaps, be their interest to deal with it as the Dutch are faid to do with the spiceries of the Molluccas, to destroy or throw away a confiderable part of it, in order to keep up the price of the rest. But it is scarce possible, even by the violence of law, to establish fuch an extensive monopoly with regard to corn; and, whereever the law leaves the trade free, it is of all commodities the leaft liable to be engroffed or monopolifed by the force of a few large capitals, which buy up the greater part of it. Not only its value far exceeds what the capitals of a few private men are capable of

Landesbibliothek Oldenburg

he might otherwise have had.

pur-

BOOK IV.

purchasing, but, supposing they were capable of purchasing it, the manner in which it is produced renders this purchase altogether impracticable. As in every civilized country it is the commodity of which the annual confumption is the greatest, so a greater quantity of industry is annually employed in producing corn than in producing any other commodity. When it first comes from the ground too, it is necessarily divided among a greater number of owners than any other commodity; and these owners can never be collected into one place like a number of independent manufacturers, but are necessarily scattered through all the different corners of the country. These first owners either immediately supply the confumers in their own neighbourhood, or they supply other inland dealers who fupply those confumers. The inland dealers in corn, therefore, including both the farmer and the baker, are necessiarily more numerous than the dealers in any other commodity, and their dispersed situation renders it altogether impossible for them to enter into any general combination. If in a year of fcarcity, therefore, any of them should find that he had a good deal more corn upon hand than, at the current price, he could hope to dispose of before the end of the feafon, he would never think of keeping up this price to his own lofs, and to the fole benefit of his rivals and competitors, but would immediately lower it in order to get rid of his corn before the new crop began to come in. The fame motives, the fame interests, which would thus regulate the conduct of any one dealer, would regulate that of every other, and oblige them all in general to fell their corn at the price which, according to the best of their judgement, was most suitable to the scarcity or plenty of the feafon.

WHOEVER examines, with attention, the history of the dearths and famines which have afflicted any part of Europe, during either the course of the present or that of the two preceding centuries,

of feveral of which we have pretty exact accounts, will find, I CHAP. believe, that a dearth never has arisen from any combination among the inland dealers in corn, nor from any other cause but a real scarcity, occasioned sometimes perhaps, and in some particular places, by the waste of war, but in by far the greatest number of cases, by the fault of the feafons; and that a famine has never arifen from any other cause but the violence of government attempting, by improper means, to remedy the inconveniencies of a dearth.

In an extensive corn country, between all the different parts of which there is a free commerce and communication, the fcarcity occasioned by the most unfavourable seasons can never be so great as to produce a famine; and the feantiest crop, if managed with frugality and œconomy, will maintain, through the year, the same number of people that are commonly fed in a more affluent manner by one of moderate plenty. The feafons most unfavourable to the crop are those of excessive drought or excessive rain. But, as corn grows equally upon high and low lands, upon grounds that are disposed to be too wet, and upon those that are disposed to be too dry, either the drought or the rain which is hurtful to one part of the country is favourable to another; and though both in the wet and in the dry feafon the crop is a good deal less than in one more properly tempered, yet in both what is loft in one part of the country is in some measure compensated by what is gained in the other. In rice countries, where the crop not only requires a very moist foil, but where in a certain period of its growing it must be laid under water, the effects of a drought are much more difmal. Even in fuch countries, however, the drought is, perhaps, scarce ever so universal as necessarily to occasion a famine, if the government would allow a free trade. The drought in Bengal, a few years ago, might probably have occafioned a very great dearth. Some improper regulations, some injudicious restraints imposed by the

BOOK the fervants of the East India Company upon the rice trade, contributed, perhaps, to turn that dearth into a famine.

When the government, in order to remedy the inconveniencies of a dearth, orders all the dealers to fell their corn at what it supposes a reasonable price, it either hinders them from bringing it to market, which may sometimes produce a famine, even in the beginning of the season; or if they bring it thither, it enables the people, and thereby encourages them to consume it so fast, as must necessarily produce a famine before the end of the season. The unlimited, unrestrained freedom of the corn trade, as it is the only effectual preventative of the miseries of a famine, so it is the best palliative of the inconveniencies of a dearth; for the inconveniencies of a real scarcity cannot be remedied; they can only be palliated. No trade deserves more the full protection of the law, and no trade requires it so much; because no trade is so much exposed to popular odium.

In years of scarcity the inferior ranks of people impute their distress to the avarice of the corn merchant, who becomes the object of their hatred and indignation. Instead of making profit upon such occasions, therefore, he is often in danger of being utterly ruined, and of having his magazines plundered and destroyed by their violence. It is in years of scarcity, however, when prices are high, that the corn merchant expects to make his principal profit. He is generally in contract with some farmers to furnish him for a certain number of years with a certain quantity of corn at a certain price. This contract price is settled according to what is supposed to be the moderate and reasonable, that is, the ordinary or average price, which, before the late years of scarcity, was commonly about eight and twenty shillings for the quarter of wheat, and for that of other grain in proportion.

In years of scarcity, therefore, the corn merchant buys a great part of his corn for the ordinary price, and fells it for a much higher. That this extraordinary profit, however, is no more than fufficient to put his trade upon a fair level with other trades, and to compenfate the many losses which he fustains upon other occasions, both from the perishable nature of the commodity itself, and from the frequent and unforeseen fluctuations of its price, seems evident enough, from this fingle circumstance, that great fortunes are as feldom made in this as in any other trade. The popular odium, however, which attends it in years of fearcity, the only years in which it can be very profitable, renders people of character and fortune averse to enter into it. It is abandoned to an inferior sett of dealers; and millers, bakers, mealmen and meal factors, together with a number of wretched hucksters, are almost the only middle people that, in the home market, come between the grower and the confumer. The perman and to bounder sew if guitners lo

THE ancient policy of Europe, instead of discountenancing this popular odium against a trade so beneficial to the publick, seems, on the contrary, to have authorised and encouraged it.

By the 5th and 6th of Edward VI. cap. 14. it was enacted, That whoever should buy any corn or grain with intent to sell it again, should be reputed an unlawful engrosser, and should, for the first fault, suffer two months imprisonment, and forfeit the value of the corn; for the second, suffer six months imprisonment, and forfeit double the value; and for the third, be set in the pillory, suffer imprisonment during the king's pleasure, and forfeit all his goods and chattels. The antient policy of most other parts of Europe was no better than that of England.

OUR

BOOK IV.

Our ancestors feem to have imagined that the people would buy their corn cheaper of the farmer than of the corn merchant, who, they were afraid, would require, over and above the price which he paid to the farmer, an exorbitant profit to himfelf. They endeavoured, therefore, to annihilate his trade altogether. They even endeavoured to hinder as much as possible any middle man of any kind from coming in between the grower and the confumer; and this was the meaning of the many restraints which they imposed upon the trade of those whom they called kidders or carriers of corn, a trade which nobody was allowed to exercife without a licence afcertaining his qualifications as a man of probity and fair dealing. The authority of three justices of the peace was, by the statute of Edward VI. necessary, in order to grant this licence. But even this restraint was afterwards thought infufficient, and by a statute of Elizabeth, the privilege of granting it was confined to the quarter-fessions.

THE antient policy of Europe endeavoured in this manner to regulate agriculture, the great trade of the country, by maxims quite different from those which it established with regard to manufactures, the great trade of the towns. By leaving the farmer no other customers but either the consumer or his immediate factors, the kidders and carriers of corn, it endeavoured to force him to exercise the trade, not only of a farmer, but of a corn merchant or corn retailer. On the contrary, it in many cases prohibited the manufacturer from exercising the trade of a shop-keeper, or from selling his own goods by retail. It meant by the one law to promote the general interest of the country, or to render corn cheap, without, perhaps, its being well understood how this was to be done. By the other it meant to promote that of a particular order of men, the shopkeepers, who would be so

much underfold by the manufacturer, it was supposed, that their CHAP. trade would be ruined if he was allowed to retail at all.

THE manufacturer, however, though he had been allowed to . keep a shop, and to fell his own goods by retail, could not have underfold the common shopkeeper. Whatever part of his capital he might have placed in his shop, he must have withdrawn it from his manufacture. In order to carry on his business on a level with that of other people, as he must have had the profit of a manufacturer on the one part, fo he must have had that of a shopkeeper upon the other. Let us suppose, for example, that in the particular town where he lived, ten per cent. was the ordinary profit both of manufacturing and shopkeeping stock; he must in this case have charged upon every piece of his own goods which he fold in his shop, a profit of twenty per cent. When he carried them from his workhouse to his shop, he must have valued them at the price for which he could have fold them to a dealer or shopkeeper, who would have bought them by wholesale. If he valued them lower, he lost a part of the profit of his manufacturing capital. When again he fold them from his shop, unless he got the same price at which a shopkeeper would have fold them, he lost a part of the profit of his shopkeeping capital. Though he might appear, therefore, to make a double profit upon the same piece of goods, yet as these goods made successively a part of two distinct capitals, he made but a fingle profit upon the whole capital employed about them; and if he made less than this profit, he was a loser, or did not employ his whole capital with the same advantage as the greater part of his neighbours.

WHAT the manufacturer was prohibited to do, the farmer was in some measure enjoined to do; to divide his capital between two different employments; to keep one part of it in his grana-Vol. II.

Q

BOOK ries and stack yard, for supplying the occasional demands of the market; and to employ the other in the cultivation of his land. But as he could not afford to employ the latter for less than the ordinary profits of farming stock, so he could as little afford to employ the former for less than the ordinary profits of mercantile stock. Whether the stock which really carried on the business of the corn merchant belonged to the person who was called a farmer, or to the person who was called a corn merchant, an equal profit was in both cases requisite, in order to indemnify its owner for employing it in this manner; in order to put his business upon a level with other trades, and in order to hinder him from having an interest to change it as soon as possible for some other. The farmer, therefore, who was thus forced to exercise the trade of a corn merchant, could not afford to fell his corn cheaper than any other corn merchant would have been obliged to do in the case of a free competition.

> THE dealer who can employ his whole stock in one fingle branch of business, has an advantage of the same kind with the workman who can employ his whole labour in one fingle operation. As the latter acquires a dexterity which enables him, with the fame two hands, to perform a much greater quantity of work; fo the former acquires fo eafy and ready a method of transacting his business, of buying and disposing of his goods, that with the same capital he can transact a much greater quantity of business. As the one can commonly afford his work a good deal cheaper, fo the other can commonly afford his goods fomewhat cheaper than if his stock and attention were both employed about a greater variety of objects. The greater part of manufacturers could not afford to retail their own goods fo cheap as a vigilant and active shopkeeper, whose sole business it was to buy them by wholesale, and to retail them again. The greater part of farmers could still less afford to retail their own corn, or to supply

the inhabitants of a town, at perhaps four or five miles distance CHAP. from the greater part of them, fo cheap as a vigilant and active corn merchant, whose sole business it was to purchase corn by wholefale, to collect it into a great magazine, and to retail it again.

THE law which prohibited the manufacturer from exercifing the trade of a shopkeeper, endeavoured to force this division in the employment of stock to go on faster than it might otherwise have done. The law which obliged the farmer to exercise the trade of a corn merchant, endeavoured to hinder it from going on fo fast. Both laws were evident violations of natural liberty, and therefore unjust; and they were both too as impolitick as they were unjust. It is the interest of every fociety, that things of this kind should never either be forced or obstructed. The man who employs either his labour or his stock in a greater variety of ways than his fituation renders necessary, can never hurt his neighbour by underfelling him. He may hurt himfelf, and he generally does fo. Jack of all trades will never be rich, fays the proverb. But the law ought always to trust people with the care of their own interest, as in their local situations they must generally be able to judge better of it than the legislator can do. The law, however, which obliged the farmer to exercise the trade of a corn merchant, was by far the most pernicious of the two.

IT obstructed, not only that division in the employment of flock which is fo advantageous to every fociety, but it obstructed likewife the improvement and cultivation of the land. By obliging the farmer to carry on two trades instead of one, it forced him to divide his capital into two parts, of which one only could be employed in cultivation. But if he had been at liberty to fell his whole crop to a corn merchant as fast as he could thresh it out,

Q 2

BOOK his whole capital might have returned immediately to the land, and have been employed in buying more cattle, and hiring more fervants, in order to improve and cultivate it better. But by being obliged to fell his corn by retail, he was obliged to keep a great part of his capital in his granaries and stack yard through the year, and could not, therefore, cultivate so well as with the fame capital he might otherwise have done. This law, therefore, necessarily obstructed the improvement of the land, and, instead of tending to render corn cheaper, must have tended to render it scarcer, and therefore dearer, than it would otherwise have been.

AFTER the business of the farmer, that of the corn merchant is in reality the trade which, if properly protected and encouraged, would contribute the most to the raising of corn. It would support the trade of the farmer in the same manner as the trade of the wholesale dealer supports that of the manufacturer.

THE wholefale dealer, by affording a ready market to the manufacturer, by taking his goods off his hand as fast as he can make them, and by sometimes even advancing their price to him before he has made them, enables him to keep his whole capital, and sometimes even more than his whole capital, constantly employed in manufacturing, and consequently to manufacture a much greater quantity of goods than if he was obliged to dispose of them himself to the immediate consumers, or even to the retailers. As the capital of the wholesale merchant too is generally sufficient to replace that of many manufacturers, this intercourse between him and them interests the owner of a large capital to support the owners of a great number of small ones, and to assist them in those losses and missortunes which might otherwise prove ruinous to them.

8

An intercourse of the same kind universally established between CHAP. the farmers and the corn merchants, would be attended with effects equally beneficial to the farmers. They would be enabled to keep their whole capitals, and even more than their whole capitals, constantly employed in cultivation. In case of any of those accidents, to which no trade is more liable than theirs, they would find in their ordinary customer, the wealthy corn merchant, a person who had both an interest to support them, and the ability to do it, and they would not, as at prefent, be entirely dependent upon the forbearance of their landlord, or the mercy of his steward. Were it possible, as perhaps it is not, to eftablish this intercourse universally, and all at once, were it posfible to turn all at once the whole farming flock of the kingdom to its proper bufinefs, the cultivation of land, withdrawing it from every other employment into which any part of it may be at present diverted, and were it possible, in order to support and affift upon occasion the operations of this great stock, to provide all at once another flock almost equally great, it is not perhaps very eafy to imagine how great, how extensive, and how sudden would be the improvement which this change of circumstances would alone produce upon the whole face of the country.

THE statute of Edward VI. therefore, by prohibiting as much as possible any middle man from coming in between the grower and the consumer, endeavoured to annihilate a trade of which the free exercise is not only the best palliative of the inconveniencies of a dearth, but the best preventative of that calamity: after the trade of the farmer, no trade contributing so much to the growing of corn as that of the corn merchant.

THE rigour of this law was afterwards foftened by feveral fubfequent flatutes, which successively permitted the engrossing of corn when the price of wheat should not exceed twenty, twenty-four, thirty-two, and forty shillings the quarter. At last, by the

15th

BOOK 15th of Charles II. c. 7. the engroffing or buying of corn in order to fell it again, as long as the price of wheat did not exceed forty-eight shillings the quarter, and that of other grain in proportion, was declared lawful to all perfons not being forestallers, that is, not felling again in the same market within three months. All the freedom which the trade of the inland corn dealer has ever yet enjoyed, was bestowed upon it by this statute. The statute of the twelfth of the present king, which repeals almost all the other antient laws against engrossers and forestallers, does not repeal the restrictions of this particular statute, which therefore still continue in force.

> This statute, however, authorizes in some measure two very abfurd popular prejudices.

> FIRST, it supposes that when the price of wheat has risen so high as forty-eight shillings the quarter, and that of other grain in proportion, corn is likely to be fo engroffed as to hurt the people. But from what has been already faid, it feems evident enough that corn can at no price be fo engroffed by the inland dealers as to hurt the people; and forty-eight shillings the quarter befides, though it may be confidered as a very high price, yet in years of fcarcity it is a price which frequently takes place immediately after harvest, when scarce any part of the new crop can be fold off, and when it is impossible even for ignorance to suppose that any part of it can be so engrossed as to hurt the people.

> SECONDLY, it supposes that there is a certain price at which corn is likely to be forestalled, that is, bought up in order to be fold again foon after in the same market, so as to hurt the people. But if a merchant ever buys up corn, either going to a particular market or in a particular market, in order to fell it again foon after in the fame mar-

ket, it must be because he judges that the market cannot be so libe- CHAP. rally supplied through the whole season as upon that particular occafion, and that the price, therefore, must soon rise. If he judges wrong in this, and if the price does not rife, he not only lofes the whole profit of the stock which he employs in this manner, but a part of the stock itself, by the expence and loss which necessarily attends the storing and keeping of corn. He hurts himself, therefore, much more effentially than he can hurt even the particular people whom he may hinder from fupplying themselves upon that particular market day, because they may afterwards supply themselves just as cheap upon any other market day. If he judges right, instead of hurting the great body of the people, he renders them a most important fervice. By making them feel the inconveniencies of a dearth fomewhat earlier than they otherwife might do, he prevents their feeling them afterwards fo feverely as they certainly would do, if the cheapness of price encouraged them to consume faster than fuited the real fcarcity of the feafon. When the fcarcity is real, the best thing that can be done for the people is to divide the inconveniencies of it as equally as possible through all the different months, and weeks, and days of the year. The interest of the corn merchant makes him study to do this as exactly as he can; and as no other person can have either the same interest, or the fame knowledge, or the fame abilities to do it fo exactly as he, this most important operation of commerce ought to be trusted entirely to him; or, in other words, the corn trade, fo far at least. as concerns the fupply of the home market, ought to be left perfeetly free.

THE popular fear of engroffing and forestalling may be compared to the popular terrors and fuspicions of witchcraft. The unfortunate wretches accused of this latter crime were not more innocent of the misfortunes imputed to them, than those who have

BOOK IV. have been accused of the former. The law which put an end to all prosecutions against witchcraft, which put it out of any man's power to gratify his own malice by accusing his neighbour of that imaginary crime, seems effectually to have put an end to those fears and suspicions, by taking away the great cause which encouraged and supported them. The law which should restore entire freedom to the inland trade of corn, would probably prove as effectual to put an end to the popular fears of engrossing and forestalling.

THE 15th of Charles II. c. 7. however, with all its imperfections, has perhaps contributed more both to the plentiful supply of the home market, and to the increase of tillage, than any other law in the statute book. It is from this law that the inland corn trade has derived all the liberty and protection which it has ever yet enjoyed; and both the supply of the home market, and the interest of tillage, are much more effectually promoted by the inland, than either by the importation or exportation trade.

THE proportion of the average quantity of all forts of grain imported into Great Britain to that of all forts of grain confumed, it has been computed by the author of the tracts upon the corn trade, does not exceed that of one to five hundred and feventy. For fupplying the home market, therefore, the importance of the inland trade must be to that of the importation trade as five hundred and seventy to one.

The average quantity of all forts of grain exported from Great Britain does not, according to the fame author, exceed the one and thirtieth part of the annual produce. For the encouragement of tillage, therefore, by providing a market for the home produce, the importance of the inland trade must be to that of the exportation trade as thirty to one.

I HAVE

I HAVE no great faith in political arithmetick, and I mean not CHAP. to warrant the exactness of either of these computations. I mention them only in order to show of how much less consequence, in . the opinion of the most judicious and experienced persons, the foreign trade of corn is than the home trade. The great cheapnefs of corn in the years immediately preceeding the establishment of the bounty, may perhaps, with reason, be ascribed in some measure to the operation of this statute of Charles II. which had been enacted about five and twenty years before, and which had therefore full time to produce its effect.

A VERY few words will fufficiently explain all that I have to fay concerning the other three branches of the corn trade.

II. THE trade of the merchant importer of foreign corn for home confumption, evidently contributes to the immediate supply of the home market, and must so far be immediately beneficial to the great body of the people. It tends, indeed, to lower fomewhat the average money price of corn, but not to diminish its real value, or the quantity of labour which it is capable of maintaining. If importation was at all times free, our farmers and country gentlemen would, probably, one year with another, get less money for their corn than they do at present, when importation is at most times in effect prohibited; but the money which they got would be of more value, would buy more goods of all other kinds, and would employ more labour. Their real wealth, their real revenue, therefore, would be the fame as at prefent, though it might be expressed by a smaller quantity of silver; and they would neither be disabled nor discouraged from cultivating corn as much as they do at present. On the contrary, as the rise in the real value of filver, in confequence of lowering the money price of corn, lowers somewhat the money price of all other commodities, it gives the VOL. II. R industry

BOOK industry of the country where it takes place some advantage in all foreign markets, and thereby tends to encourage and increase that industry. But the extent of the home market for corn must be in proportion to the general industry of the country where it grows, or to the number of those who produce something else, and therefore have fomething else, or what comes to the fame thing, the price of fomething elfe, to give in exchange for corn. But in every country the home market, as it is the nearest and most convenient, fo is it likewise the greatest and most important market for corn. That rife in the real value of filver, therefore, which is the effect of lowering the average money price of corn, tends to enlarge the greatest and most important market for corn, and thereby to encourage, instead of discouraging, its growth.

> By the 22d of Charles II. c. 13. the importation of wheat, whenever the price in the home market did not exceed fifty-three shillings and four pence the quarter, was subjected to a duty of fixteen shillings the quarter; and to a duty of eight shillings whenever the price did not exceed four pounds. The former of these two prices has, for more than a century past, taken place only in times of very great scarcity; and the latter has, so far as I know, not taken place at all. Yet, till wheat had rifen above this latter price, it was by this statute subjected to a very high duty; and, till it had rifen above the former, to a duty which amounted to a prohibition. The importation of other forts of grain was restrained by duties proportionably high.

THE distress which, in years of scarcity, the strict execution of this statute might have brought upon the people, would probably have been very great. But, upon fuch occasions, its execution was generally suspended by temporary statutes, which permitted, for a limited time, the importation of foreign corn. The necessity of thefe

these temporary statutes sufficiently demonstrates the impropriety CHAP. of this general one.

THESE restraints upon importation, though prior to the establishment of the bounty, were dictated by the same spirit, by the fame principles, which afterwards enacted that regulation. -How hurtful foever in themselves, these or some other restraints upon importation became necessary in consequence of that regulation. If, when wheat was either below forty-eight shillings the quarter, or not much above it, foreign corn could have been imported either duty free, or upon paying only a fmall duty, it might have been exported again, with the benefit of the bounty, to the great loss of the publick revenue, and to the intire perversion of the institution; of which the object was to extend the market for the home growth, not that for the growth of foreign countries.

brings the quester; and by the rath and a sin of Waltism III, & sec. III. THE trade of the merchant exporter of corn for foreign confumption, certainly does not contribute directly to the plentiful fupply of the home market. It does fo, however, indirectly. From whatever fource this fupply may be usually drawn, whether from home growth or from foreign importation, unless more corn is either usually grown, or usually imported into the country, than what is usually confumed in it, the supply of the home market can never be very plentiful. But, unless the furplus can, in all ordinary cases, be exported, the growers will be careful never to grow more, and the importers never to import more, than what the bare confumption of the home market requires. That market will very feldom be overstocked; but it will generally be underflocked, the people, whose business it is to supply it, being generally afraid lest their goods should be left upon their hands. The prohibition of exportation limits the improvement and cultivation of the country to what the fupply of its own inhabitants R 2

requires.

BOOK requires. The freedom of exportation enables it to extend its cultivation for the fupply of foreign nations.

By the 12th of Charles II. c. 4. the exportation of corn was permitted whenever the price of wheat did not exceed forty shillings the quarter, and that of other grain in proportion. By the 15th of the same prince this liberty was extended till the price of wheat exceeded forty-eight shillings the quarter; and by the 22d, to all higher prices. A poundage, indeed, was to be paid to the king upon such exportation. But all grain was rated so low in the book of rates, that this poundage amounted only upon wheat to a shilling, upon oats to sour-pence, and upon all other grain to sixpence the quarter. By the 1st of William and Mary, the act which established the bounty, this small duty was virtually taken off whenever the price of wheat did not exceed forty-eight shillings the quarter; and by the 1sth and 12th of William III. c. 20. it was expressly taken off at all higher prices.

The trade of the merchant exporter was in this manner, not only encouraged by a bounty, but rendered much more free than that of the inland dealer. By the last of these statutes, corn could be engrossed at any price for exportation; but it could not be engrossed for inland sale, except when the price did not exceed forty-eight shillings the quarter. The interest of the inland dealer, however, it has already been shown, can never be opposite to that of the great body of the people. That of the merchant exporter may, and in fact sometimes is. If, while his own country labours under a dearth, a neighbouring country should be afflicted with a famine, it might be his interest to carry corn to the latter country in such quantities as might very much aggravate the calamities of the dearth. The plentiful supply of the home market was not the direct object of those statutes; but, under the pretence of encouraging

raging agriculture, to raife the money price of corn as high as possible, and thereby to occasion, as much as possible, a constant dearth in the home market. By the discouragement of importation, the supply of that market, even in times of great scarcity, was confined to the home growth; and by the encouragement of exportation, when the price was so high as forty-eight shillings the quarter, that market was not, even in times of considerable scarcity, allowed to enjoy the whole of that growth. The temporary laws, prohibiting for a limited time the exportation of corn, and taking off for a limited time the duties upon its importation, expedients to which Great Britain has been obliged so frequently to have recourse, sufficiently demonstrate the impropriety of her general system. Had that system been good, she would not so frequently have been reduced to the necessity of departing from it.

WERE all nations to follow the liberal fystem of free exportation and free importation, the different states into which a great continent was divided would fo far refemble the different provinces of a great empire. As among the different provinces of a great empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine; so would the freedom of the exportation and importation trade be among the different flates into which a great continent was divided. The larger the continent, the easier the communication through all the different parts of it, both by land and by water, the less would any one particular part of it ever be exposed to either of these calamities, the scarcity of any one country being more likely to be relieved by the plenty of some other. But very few countries have entirely adopted this liberal fystem. The freedom of the corn trade is almost every where more or less restrained, and, in many countries, is confined: by fuch abfurd regulations, as frequently aggravate the unavoidable misfortune of a dearth into the dreadful calamity of a famine.

The.

BOOK IV.

The demand of fuch countries for corn may frequently become for great and fo urgent, that a small state in their neighbourhood, which happened at the same time to be labouring under some degree of dearth, could not venture to fupply them without expofing itself to the like dreadful calamity. The very bad policy of one country may thus render it in some measure dangerous and imprudent to establish what would otherwise be the best policy in another. The unlimited freedom of exportation, however, would be much less dangerous in great states, in which the growth being much greater, the fupply could feldom be much affected by any quantity of corn that was likely to be exported. In a Swifs canton, or in some of the little states of Italy, it may, perhaps, sometimes be necessary to restrain the exportation of corn. In such great countries as France or England it scarce ever can. To hinder, befides, the farmer from fending his goods at all times to the best market, is evidently to facrifice the ordinary laws of justice to an idea of public utility, to a fort of reasons of state; an act of legiflative authority which ought to be exercifed only, which can be pardoned only in cases of the most urgent necessity. The price at which the exportation of corn is prohibited, if it is ever to be prohibited, ought always to be a very high price.

The laws concerning corn may every where be compared to the laws concerning religion. The people feel themselves so much interested in what relates either to their subsistence in this life, or to their happiness in a life to come, that government must yield to their prejudices, and, in order to preserve the public tranquillity, establish that system which they approve of. It is upon this account, perhaps, that we so seldom find a reasonable system established with regard to either of those two capital objects.

IV. THE trade of the merchant carrier, or of the importer of foreign corn, in order to export it again, contributes to the plentiful

plentiful supply of the home market. It is not indeed the direct CHAP. purpose of his trade to sell his corn there. But he will generally be willing to do so, and even for a good deal less money than he might expect in a foreign market; because he saves in this manner the expence of loading and unloading, of freight and insurance. The inhabitants of the country which, by means of the carrying trade, becomes the magazine and storehouse for the supply of other countries, can very seldom be in want themselves. Though the carrying trade might thus contribute to reduce the average money price of corn in the home market, it would not thereby lower its real value. It would only raise somewhat the real value of silver.

THE carrying trade was in effect prohibited in Great Britain upon all ordinary occasions, by the high duties upon the importation of foreign corn; and upon extraordinary occasions, when a scarcity made it necessary to suspend those duties by temporary statutes, exportation was always prohibited. By this system of laws, therefore, the carrying trade was in effect prohibited upon all occasions.

That fystem of laws, therefore, which is connected with the establishment of the bounty, seems to deserve no part of the praise which has been bestowed upon it. The improvement and prosperity of Great Britain, which has been so often ascribed to those laws, may very easily be accounted for by other causes. That security which the laws in Great Britain give to every man that he shall enjoy the fruits of his own labour, is alone sufficient to make any country slourish, notwithstanding these and twenty other absurd regulations of commerce; and this security was perfected by the revolution, much about the same time that the bounty was established. The natural effort of every individual

and the second s

BOOK to better his own condition, when fuffered to exert itself with freedom and security, is so powerful a principle that it is alone, and without any assistance, not only capable of carrying on the society to wealth and prosperity, but of surmounting a hundred impertinent obstructions with which the folly of human laws too often incumbers its operations; though the effect of these obstructions is always more or less either to encroach upon its freedom, or to diminish its security. In Great Britain industry is perfectly secure; and though it is far from being perfectly free, it is as free or freer than in any other part of Europe.

Though the period of the greatest prosperity and improvement of Great Britain, has been posterior to that system of laws which is connected with the bounty, we must not upon that account impute it to those laws. It has been posterior likewise to the national debt. But the national debt has most assured not been the cause of it.

Though the fystem of laws which is connected with the bounty, has exactly the same tendency with the police of Spain and Portugal; to lower somewhat the value of the precious metals in the country where it takes place; yet Great Britain is certainly one of the richest countries in Europe, while Spain and Portugal are perhaps among the most beggarly. This difference of situation, however, may easily be accounted for from two different causes. First, the tax in Spain, the prohibition in Portugal of exporting gold and silver, and the vigilant police which watches over the execution of those laws, must, in two very poor countries, which between them import annually upwards of six millions sterling, operate, not only more directly, but much more forcibly in reducing the value of those metals there, than the corn laws can do in Great Britain. And, secondly, this bad policy is not in those countries counter-balanced by the general liberty

liberty and fecurity of the people. Industry is there neither free CHAP. nor fecure, and the civil and ecclefiaftical governments of both Spain and Portugal, are fuch as would alone be fufficient to perpetuate their present state of poverty, even though their regulations of commerce were as wife as the greater part of them are abfurd and foolish.

THE 13th of the present king, c. 43. seems to have established a new fystem with regard to the corn laws, in many respects better than the ancient one, but in one respect perhaps not quite

too low and take teems to be an impropered belides in dispring ex-

By this statute the high duties upon importation for home confumption are taken off as foon as the price of wheat is fo high as forty-eight shillings the quarter, and instead of them a fmall duty is imposed of only fixpence upon the quarter of wheat, and upon that of other grain in proportion. The home market is in this manner not fo totally excluded from foreign supplies as it was before.

By the fame statute the old bounty of five shillings upon the quarter of wheat ceases when the price rises so high as fortyfour shillings, and upon that of other grain in proportion. The bounties too upon the coarfer forts of grain are reduced fomewhat lower than they were before, even at the prices at which they take place. If bounties are as improper as I have endeavoured to prove them to be, the fooner they cease and the lower they are, fo much the better.

THE fame statute permits at all prices the importation of count in order to be exported again, duty free; provided it is in the meantime lodged in the king's warehouse. This liberty indeed extends to no more than twenty-five of the different ports of VOL. II. Great
